Protein Sequence Searches - February 2005

talance on ARSC bases repositive base region of

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

Pemphigus vulgaris auto-antigens and multiple sclerosis non-self antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease.

Claim 1; Page 38; 58pp; English.

pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MRC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autorementials in individuals with the autoimmune disease. This peptide is derived from the human desmoglein

```
The present invention relates to oligonucleotides (see AAL26793-AAL34659)
encoding polymorphic variants of proteins related to amylases, amyloid
proteins, anglopoletin, appotosis related proteins, cadherin, cyclin,
proteins, cadherin, cyclin,
polymerase, oncogenes, histones, kinases, colony stimulating factors,
complement related proteins, cytchromes, kinasis, cytckines,
interferons, interleukins, G-protein coupled receptors and thioesterases.
The present sequence is a peptide encoded by them may be used in the
prevention, diagnosis and treatment of diseases associated with
inappropriate expression of the proteins listed above. Disorders that may
be prevented, diagnosed and/or treated include multifactorial diseases
with a genetic component, such as autoimmune diseases (e.g. rheumatoid
arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus
cand Grave's disease), inflammation, cancer (e.g. cancers of the bladder,
brain, breast, colon and kidney, leukaemia), diseases of the nervous
system and an infection of pathogenic organisms
                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunosuppressive; immunostimulatory; antiinflammatory; cytostatic; neuroprotective; antimicrobial; gene therapy; vaccine; amylase; cancer; amyloid protein; angiopoietin; selated protein; cadherin; cyclin; polymerase; oncogene; histone; kinase; colony stimulating factor; complement related protein; cytochrome; kinase; cytokine; interferon; multifactorial disease; autoimmune disease; inflammation; nervous system disease.
3 protein (amino acids 78-93 (sic)) and is implicated as a self epitope in pemphigus vulgaris. Peptides derived from the human desmoglein protein are described in AAW04841-47
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections.

The present invention relates to oligonucleotides (see AAL26793-AAL34659)
encoding polymorphic variants of proteins related to amylases, amyloid
proteins, anglopolethin, apoptosis related proteins, cadherin, cyclin,
polymerase, oncogenes, histones, kinases, colony stimulating factors,
complement related proteins, cytochromes, kinesins, cytokines,
interferons, interleukins, G-protein coupled receptors and thioesterases.
The present sequence is a peptide encoded by one such oligonucleotide.
The oligonucleotides and the peptides encoded by them may be used in the
prevention, diagnosis and treatment of diseases associated with
inappropriate expression of the proteins listed above. Disorders that may
be prevented, diagnosed and/or treated include multifactorial diseases
with a genetic component, such as autoimmune diseases (e.g. rheumatoid
arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus
arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus
brain, breast, colon and kidney, leukaemia), diseases of the nervous
system and an infection of pathogenic organisms

Comprising one or more single nucleotide polymorphisms (SNPs). ABB5631 comprising one or more single nucleotide polymorphisms (SNPs). ABB5631 comprising one or more single nucleotide polymorphisms (SNPs). ABB5631 coligonucleotides. The sequences from the present invention can have oligonucleotides. The sequences from the present invention can have immunosuppressive, cytostatic, antihinflammatory, neuroprotective and antihodies from the present invention can be used for treating a subject suffering from, at risk for, or suspected of, suffering from a pathology may be autoimmune diseases, inflammation, cancer, diseases of the nervous system, and infection by pathogenic microorganisms. The SNPs are also useful for determining which forms of a characterised are also useful for determining which forms of a characterised are present in individuals. The antibodies may be used in the detection, quantitation and/or cellular or tissue localisation of a polymorphic protein (e.g., for use in measuring levels of the polymorphic protein (e.g., for use in measuring levels of the polymorphic protein (e.g., for use in measuring levels of the polymorphic

AAR 90413-R90468 represent antibody displacing peptides. These sequences displace the monoclonal antibody designated 561. These sequences can be used in a method to select target cells from a heterogeneous cell cuspension. In the suspension, there is at least one complex of a cell suspension. In the suspension, there is at least one complex of a cell suspension, and contacted with a peptide (such as this sequence) that cer auspension, and contacted with a peptide (such as this sequence) that the suspension, and contacted with a peptide (such as this sequence) that cell surface antigen (AB) biopanning random peptide display cell binds to the Ab, displacing it from the Ag and releasing the cell. These sequences can be identified by biopanning random peptide display cells rate antigen, or by analysis of the complementarity determining cell surface antigen, or by analysis of the complementarity determining cells mining regions of the Ab. These sequences can also be used in a method for determining the number of specific cells in a composition. The methods can be used for positive selection of CD34 haematopoietic cells, and removal of undesired tumour cells or lymphocytes from the selected cells. The pure CD34 cells are reinfused into a cancer patient after high dose therapy to reconstitute the immune system. Cancer cells can also be solated to determine their chemotherapeutic susceptibility, or for the production of patient-specific vaccines or antibodies. These sequences allow for the recovery of cells from solid supports, in high yield, without enzymatic cleavage. They are relatively inexpensive and safe, and cells are reinfused to relatively inexpensive and safe, and cells are also be allowed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Selecting target cells by reacting specific antibody to surface antigen - then disrupting the complex formed with peptide displacer, partic. for selecting CD34 cells for reconstitution of immune system after anticancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes peptides of 4-17 amino acids which displace either the anti-CD34 monoclonal antibody designated 561, the anti-CD34 monoseme annoclonal antibody produced 561, the 11646 (designated 9069), the anti-CD34 antibody produced by hybridoma ATCC HB-11885 (9079), or the anti-CD34 antibody produced by hybridoma ATCC HB-11884 (9187), from a cell surface antibody produced by hybridoma ATCC HB-11884 (9187), from a cell surface antigen on a target cell. The peptides are useful for displacing antibodyses bound to cell surfaces to release cells that have been positively selected by antibody-mediated binding to beads or other solid support. ANY55107 to AANY55319 represent peptides used in the exemplification of the present
                                                                                                                                                                                       Antibody releasing peptide; CD34; hybridoma; binding; antigen; cell surface antigen; identification; haematopoietic stem cell; tumour; cancer; immune system; therapy; displacement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes peptides of 4-17 amino acids which displace either the anti-CD34 monoclonal antibody designated 561, the anti-CD34 mouse monoclonal antibody produced by the hybridoma ATCC HB-11846 (designated 9059), the anti-CD34 antibody produced by hybridoma ATCC HB-11885 (9079), or the anti-human breast cancer antibody produced by hybridoma ATCC HB-11884 (9187), from a cell surface antigen on a target call. The peptides are useful for displacing antibodies bound to cell surfaces to release cells that have been positively selected by antibody-mediated binding to beads or other solid support. AAYS5107 to AAX55319 represent peptides used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; haematopoietic CD34+ cell; binding peptide; monoclonal antibody; non-enzymatic cell selection method; haematopoietic stem cell; haematopoietic progenitor cell; antibody 561; breast cancer cell; antibody 9187; cell surface determinant; diagnostic cell based assay.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                            monoclonal anti-breat cancer antibody 9187, from a patient's blood or bone marrow. Identification of peptide epitopes for antibodies which recognise cell surface determinants also allows construction of fagnostic cell based assays. The peptide mediated release is enzyme free and thus leaves the cell surface proteins intact. Moreover, peptide and thus eleaves the target cell free of bound antibody or antibody fragments. The method also produces a high yield of functional target cells and is relatively inexpensive to carry out
                                                                                                                                                                                   This sequence represents a human haematopoietic CD34+ cell binding peptide, and was used to test the method of the invention. The method is a non-enzymatic method for the positive selection of one or more target cells from a heterogeneous cell suspension, by using specific peptides which effect the displacement and release of a specific target cell from a specific monoclonal antibody. The method is useful for positive selection and specific release of target human haematopoietic stem/progenitor cells bound by the monoclonal anti-CD34 antibodies and the antibody 561. The method is also useful for positive selection and specific release of target human breast cancer cells, bound by the
                                                                                                           Non-enzymatic method for the positive selection of target cells from a heterogeneous cell suspension, useful for selecting human breast cancer cells from a patient's blood or bone marrow.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; haematopoietic CD34+ cell; binding peptide; monoclonal antibody; non-enzymatic cell selection method; haematopoietic stem cell; haematopoietic progenitor cell; antibody 561; breast cancer cell; antibody 9187; cell based assay.

peptide, and was used to test the method of the invention. The method is a non-enzymatic method for the positive selection of one or more target cells from a heterogeneous cell suspension, by using specific peptides which effect the displacement and release of a specific target cell from a specific monoclonal antibody. The method is useful for positive selection and specific release of target human haematopoletic stem/progenitor cells bound by the monoclonal anti-CD34 antibodies and specific release of target human breast cancer cells, bound by the monoclonal anti-breast cancer antibody 9187, from a patient's blood or monoclonal anti-breast cancer antibody 9187, from a patient's blood or cancer antibody 9187, from a patient's blood or commarrow. Identification of peptide epitopes for antibodies which recognise cell based assays. The peptide mediated release is enzyme free and thus leaves the cell surface proteins intact. Moreover, peptide completed release leaves the target cell free of bound antibody or antibody fragments. The method also produces a high yield of functional carry out
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
Non-enzymatic method for the positive selection of target cells from a heterogeneous cell suspension, useful for selecting human breast cancer cells from a patient's blood or bone marrow.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Providing allelic variant epitope of protein based on single nucleotide polymorphism by defining target protein, screening database of protein, identifying, selecting allelic variant protein, creating variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                               This sequence represents a human haematopoietic CD34+ cell binding

                                                                                                                                                                                                                                                                                                                                                                                                                            8
                          The invention relates to a novel method for providing epitopes of allelic variants of antigenic proteins from specific species based on single nucleotide polymorphism (SNP), by defining target protein/peptide or its subset, screening database of DNA encoding target protein, identifying, selecting allelic peptide/protein variants, expression product or its fragment encoded by DNA sequence having SNP, creating variant epitopes, selecting epitopes binding to MHC protein. A protein of the invention has useful for generating as NP profile of one or more individuals from a given species by applying the method for several protein from the cancer. This is useful for diagnosing a disease in an individual by generating the SNP-related polymorphic profile. A method of the invention is useful for transplanting haematopoietic stem cells from a donor to a creiptent and treating enacer, preferably leukaemia, and for determining the progression, regression or onset of a treated disease. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition of peptides and nucleic acids capable of binding Major Histocompatibility Complex molecules, useful for diagnosing, preventing or treating viral infections or cancer, such as prostate cancer, hepatitis B or AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cytostatic; hepatotropic; virucide; antiinflammatory; anti-HIV; gene therapy; vaccine; HLA binding peptide; HTL epitope; liposome; prostate specific antigen; prostate specific membrane antigen; hepatitis C virus antigen; hepatitis C virus antigen; malignant melanoma antigen; MAGR; Epstein Barr virus; cancer; prostate cancer; AIDS; renal carcinoma; cervical carcinoma; lymphoma;

```
The invention relates to a novel composition comprising one or more peptides or nucleic acids encoding an HLA binding peptide. The composition further comprises an HTL epitope. It also comprises a spacer molecule, a carrier, an MHC targeting sequence or a lipid. The peptides are incorporated as part of a liposome. The peptide is from an antigen calcided from prostate specific antigen (PSA), prostate specific membrane antigen (PSA), hepatitis B virus (HBV) antigen, hepatitis C virus (HCV) antigen, malignant melanoma antigen (MAGB), Epstein Barr virus, human immunodeficiency type-1 (HIV-I), human immunodeficiency type-1 (HIV-I), human immunodeficiency type-2 (HIV-2), Epstein Barr virus, human immunodeficiency type-1 (HIV-I), human immunodeficiency type-1 (HIV-I), human immunodeficiency type-1 (HIV-I), human immunodeficiency type-1 (HIV-I), human immunodeficiency type-2 (HIV-2), Epstein Barr virus, human immunodeficiency type-1 (HIV-I), human immunodeficiency type-1 (HIV-I), human immunodeficiency type-1 (HIV-I), human immunodeficiency type-2 (HIV-2), Fabilion virus, Lassa virus, Mycobacterium type-2 (HIV-2), Explicated protein (TKP). The composition is useful for preventing or treating viral infections or cancer, such as prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, CMV or chondyloma acuminatum. The composition is also be used for diagnosing such diseases. This sequence represents a peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Saccharomyces cerevisiae; complementary peptide; peptide identification;

The invention relates to a composition comprising 273P4B7 proteins. The composition and proteins are useful for detecting and treating cancer by inhibiting the growth or viability of cancer cells. The present sequence represents the amino acid sequence of a human 273P4B7v.1 protein epitope. Note the epitope sequences are displayed in tables VIII-XLIX.
                                                                                                                                                                                                                                                                                                                                         New composition comprising 273P4B7 proteins, useful for detecting and treating cancer by inhibiting the growth or viability of cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New composition comprising 273P4B7 proteins, useful for detecting and treating cancer by inhibiting the growth or viability of cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and darugs for drug flacovery and as lead ligands for drug design and sevelopment. The present sequence is a complementary peptide from Saccharomyces cerevisiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design.

Claim 1; Fig 2A; 268pp; English.

XX

CC The invention relates to a composition comprising 273P4B7 proteins. The CC composition and proteins are useful for detecting and treating cancer by CC inhibiting the growth or viability of cancer cells. The present sequence CC represents the amino acid sequence of a human 273P4B7v.1 protein epitope. CC Note the epitope sequences are displayed in tables VIII-XLIX.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

36K kidney stone protein - unidentified bacterium (fragment)

5.Species: unidentified bacterium

6.Species: unidentified bacterium

6.Date: 07-Feb-1997 #sequence_revision 07-Feb-1997 #text_change 10-Jul-1998

6.Accession: B58502

8.Binette, M.B.

8.Binette, Binette, M.B.

8.Abinetted to the Protein Sequence Database, October 1996

8.Description: The proteins of kidney and gallbladder stones.

8.Asferience number: A58501

8.Asferience number: A58501

8.Astatus: preliminary

8.Ascession: B58502

8.Astatus: protein

8.Ascession: B58502

8.Astatus: protein

8.Ascession: B58502

8.Astatus: protein

8.Astatus: protein

S71034
potB protein - Salmonella typhimurium (fragment)
C;Species: Salmonella typhimurium
C;Species: S71034
R;Stetin, M.A.; Leung, K.Y.; Zwick, M.; Garcia-del Portillo, F.; Finlay, B.B.
Mol. Microbiol. 20, 151-164, 1996
A;Title: Identification of a Salmonella virulence gene required for formation of filamen
A;Reference number: S71033; MUID:97014378; PMID:8861213
A;Recension: S71034
A;Recension: S71034
A;Residues: Unilary; nucleic acid sequence not shown; translation not shown
A;Molecule type: DNA
A;Residues: 1-12 <STE>
A;Cross-references: UNIPROF:Q56060; EMBL:U51867; NID:g1272352; PIDN:AA897466.1; PID:g127A;Note: the nucleotide sequence was submitted to the EMBL Data Library, March 1996

-1- FUNCTION: DNA terminal protein is linked to the 5' ends of both strands of the genome through a phosphodiester bond between the beta-hydroxyl group of a serine residue and the 5'-phosphate of the terminal deoxyadenylate. This protein is essential for DNA replication and is involved in the priming of DNA elongation.
                                                                                                                                                                                                                                                                                                                                    MEDLINE=90128268; PubMed=2515115; DOI=10.1016/0378-1119(89)90498-8;

Pemphigus vulgaris auto-antigens and multiple sclerosis non-self antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease.

Claim 1; Page 38; 58pp; English.

pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MRC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is derived from the human desmoglein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modulation; nonclassical cadherin mediated cell adhesion, CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin-15; T-cadherin; cadherin; cadherin; protocadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; rheumatoid archiritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, arbhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting
3 protein (amino acids 97-111) and is implicated as a self epitope in pemphigus vulgaris. Peptides derived from the human desmoglein protein are described in AAW04841-47

ö
                    expressing cell, preventing or treating obesity in a mammal, stimulating blood vessel regression in a mammal, enhancing drug delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of nonclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for reducing scar tissue, or enhancing or directing neutrite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating age. psoriasis attritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. AAK6552 to AAK64572 represent specifically claimed peptides, and AAK6573 to AAK6463 and AAZ33186 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; Cabeadherin; cadherin-6; cadherin-7; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; protocadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; remocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid
inducing apoptosis in a nonclassical cadherin-

    .10
/note= "the terminal residues are condensed with each
other to form a cyclic peptide"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cadherin-7 cell adhesion recognition cyclic peptide SEQ ID NO:1340.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                       The present invention describes cadherin modulating agents (MA)

Comprising peptides which comprise a nonclassical cadherin cell adhesion

Comprisition (CAR) sequence. The MAS can be used for modulating

Comordassical cadherin-mediated functions. They can be used for e.g.

Inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug the attention of a mammal, cenhancing delivery of a drug to a tumour in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

CC angiogenesis in a mammal inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing one treating obesity in a mammal, stimulating

CD contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting symaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

CC e.g. enhancing or directing neurite outgrowth, facilitating wound healing

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

created maculas degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diagnosis and in bioreactors.

The present invention describes cadherin modulating agents (MA)

Comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

comman, enhancing delivery of a drug to a tumour in a mammal, recating cancer in

can ammal, inhibiting metastasis of a cancer in a mammal, inhibiting

compressing cell, preventing or treating obesity in a mammal, stimulating

concressing vacopermeablility in a mammal, enhancing dudesion disease,

increasing vacopermeablility in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

cor reducing acar tissue, or enhancing adhesion of foreign tissue in a

cor reducing acar tissue, or enhancing adhesion of foreign tissue in a

cor products can also be used for treating e.g. psoriasis, arthritis, age

cor products can also be used for detection and diagnosis and in bioreactors.

AAY66532 to AAX64572 represent specifically claimed peptides, and

cor hand a cor the correction and diagnosis and in bioreactors.

AAX64573 to AAX64572 represent specifically claimed peptides and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                   New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-8; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                      The present invention describes cadherin modulating agents (MA)

Comprising peptides which comprise a nonclassical cadherin cell adhesion

cerecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in

can amamal, inhibiting metastasis of a cancer in a mammal, inhibiting

can angiogenesis in a nammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

CD angiogenesing vasopermeability in a mammal, enhancing dude delivery to the

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

crelated maculas degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diadenosis and in bioreactors.

AAV66531 to AAV64572 represent specifically claimed peptides, and

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

comprisition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical cadherin expressing cells in a

mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting meteatasis of a cancer in a mammal, inhibiting

can aminogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal. Hely can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diapeness. The

products can also be used for detection and diapeness and in bioreactors.

ANY66522 to AAY6463 and AAZ3183 to AAX63186 represent sequences used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cerecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in

ca mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

ca mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

can expressing cell, preventing or treating obesity in a mammal, stimulating

contral nervous system, treating a demyelinating neurological disease,

contral nervous system, treating a demyelinating neurological disease,

contral nervous system, treating a demyelinating synaptic stability in

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

con reducing scar tissue, or enhancing adhesion of foreign tissue in a

conclassing vascons in such for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and diabetes. The

conclassing can also be used for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and diabetes. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-18; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin; cadherin; cadherin; cadherin; cadherin; cadherin; cadherin; cadherin; catherin; 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes cadherin modulating agents (MA) recognition (CAR) sequence. The MAS can be used for modulating nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAS can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adherin-mediated functions. They can be used for e.g. memmal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug through the skin of a mammal, a mammal, inhibiting enhancing delivery of a cuncer in a mammal, inhibiting anglogenesis in a mammal, inducing apoptosis in a monclassical cadherin-expressing cell, preventing or treating obesity in a mammal, stimulating central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of increasing vasopermeability in a mammal, enhancing adhesion of nonclassical cadherin-expressing cells, inhibiting synaptic stability in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note= "the terminal residues are condensed with each other to form a cyclic peptide"

a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. AAY60592 to AAY64572 represent specifically claimed peptides, and AAX31313 to AAX33138 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, comprising a modulating agent comprising a desmosomal cadherin cell adhesion recognition CAR sequence (ABB45341-ABB47262), a non-peptide mimetic of a desmosomal cadherin CAR sequence, a substance such as an antibody or antigen-binding fragment that specifically binds a desmosomal cadherin CAR sequence and/or a polynucleotide encoding a polypeptide that comprises a desmosomal cadherin CAR sequence or analogue. The modulating agents have immunosuppressive, cytostatic and antiapoptotic activity and are used to facilitate wound healing and/or reduce scar tissue, for enhancing adhesion of foreign tissue implants (e.g. skin graft or organ implant), treating an autoimmune blistering disorder and to treat cancer (e.g. carcinoma, leukaemia or melanoma) and induce apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; antiapoptotic; wound healing; reduce scar tissue; skin graft; organ implant; autoimmune blistering disorder; cancer; apoptosis.
                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, useful for facilitating wound healing and/or reducing scar tissue, treating cancer and inducing apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Desmosomal cadherin; cell adhesion; CAR sequence; immunosuppressive;
                                                                                                                                                                                                                                                                                  ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes cadherin modulating agents (MA) recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting apoptosis in a nonclassical cadherin-expressing cell, preventing or treating obseity in a mammal, stimulating blood vessel regression in a mammal, enhancing drug delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of nonclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, atthritis, ageralated macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. AAV60592 to AAV64572 represent specifically claimed peptides, and AAV64573 to AAV64643 and AAZ33183 to AAZ33186 represent sequences used in

commal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug through the skin of a mammal, contained delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting cancer in a mammal, inhibiting cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cangiogenesis in a mammal, inhibiting apoptosis in a monclassical cadhering expressing cell, preventing or treating obesity in a mammal, stimulating blood vessel regression in a mammal, enhancing drug delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting symptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for cancer is a mammal. They can also be used for treating e.g. psoriasis, arthritis, age corrected macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating can diagnosis and in bioreactors. AAX66531 to AAX64573 to AAX6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modulation; nonclassical cadherin mediated cell adhesion, CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-7; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin cadherin related neuronal receptor; LI-cadherin; protocadherin; desmoglalin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                              The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CAR) sequence. The MAs can be used for modulating

nonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical radherin expressing cells in a

mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

can expressing cell, preventing or treating obesity in a mammal, simulating

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing daylesion of

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal. They can also be used for

conclassical cadherin-expressing cells, inhibiting symaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

crelated maculas degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diagnosis and in bioreactors.

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cerecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

can mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

can inhibiting adhesion of nonclassical cadherin-

can amamal, inhibiting metastasis of a cancer in a mammal, inhibiting

can inhibiting or treating obesity in a mammal, simulating

contral nervous system, treating a demyelinating neurological disease,

increasing vacopermeability in a mammal. They can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

cor reducing experentation, multiple sclerosis and diabetes. The

products can also be used for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diagnosis and in bioreactors.

ANY6652 to AAY64512 represent specifically claimed peptides, and

ANY6652 to AAY64513 and AAZ3183 to AAX3188 represent sequences used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; caberin-for adherin-for cadherin-for cadherin-for cadherin-for cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin-15; T-cadherin; cadherin; cadherin; cadherin; calcin binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                        New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cadherin-6 cell adhesion recognition cyclic peptide SEQ ID NO:1022.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

recognition (CAR) sequence. The MAs can be used for modulating of mammal, and mammal cannot assical cadherin-mediated functions. They can be used for e.g.

conclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, chalting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting corressing cell, preventing or treating obesity in a mammal, stimulating corporates in a mammal, inhibiting adenting obesity in a mammal, stimulating corporates in a mammal, enhancing drug delivery to the corporating vasopermeability in a mammal, enhancing adhesion of increasing vasopermeability in a mammal. Hely can also be used for a mammal. They can also be used for treating e.g. psoriasis, arthritis, age correlated macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psoriasis, arthritis, and AASI31181 to AAV64572 represent specifically claimed peptides, and the exammlification of the process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.

The invention relates to modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, comprising a modulating agent comprising a desmosomal cadherin cell adhesion recognition CAR sequence (ABB45341-ABB47262), a non-peptide mimetic of a desmosomal cadherin CAR sequence, a substance such as an antibody or antigen-binding fragment that specifically binds a desmosomal cadherin CAR sequence and/or a polymucleotide encoding a polypeptide that comprises a desmosomal cadherin CAR sequence or analogue. The modulating agents have immunosuppressive, cytostatic and antiapoptotic activity and are used to facilitate wound healing and/or reduce scar tissue, for enhancing adhesion of foreign tissue implants (e.g. skin graft or organ implant), treating an autoimmune blistering disorder and to treat cancer (e.g. carcinoma, leukaemia or melanoma) and induce apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PA0097
starch phosphorylase (EC 2.4.1.1) - fungus (Fusarium sporotrichioides) (fragment)
NyAlternate names: maltodextrin phosphorylase
C;Species: Pusarium sporotrichioides
C;Species: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 23-Mar-2001
C;Accession: PA0097

actin in a 1:1 ratio.

-!- MISCELLANDOUS: On the 2D-gel the determined pI of this unknown protein is: 4.4, its MW is: 14.0 kDa.

-!- SIMILARITY: Belongs to the profillin family.
